

Supplementary Fig. 1.

A549 cells (1.0×10^5 cells/mL) were incubated for 24 h, then treated with RN-1734 (10, 20 μ M), or GSK2193874 (1, 5 μ M), incubated another 24 h, and seeded 1.0×10^5 cells per 100 mm dish. After incubation for 1 week, the cells were stained with 0.5% crystal violet. Colonies containing more than 50 cells were counted (n=3).
