

Supplemental Figure 1. Gating strategy used for flow cytometric analysis.

**Supplemental Figure 2.** (A) C57BL/6J male mice ( $n = 5$  per group) were intranasally infected with PR8 viruses and adoptively transferred with myeloid-derived suppressor cells (MDSCs). Then, mice were monitored daily for 2 weeks for (B) survival and (C) body weight loss. The log-rank (Mantel-Cox) test was used to perform statistical analysis ( $*p < 0.05$ ).
